

### Lightning Ready

Pages dynamically style based on the current user interface. Works great in Lightning, Classic, and mixed environments.

### 100% Native

Built entirely on the Force.com platform. Enhances the native Salesforce records you already use.

### Great Support

We pride ourselves on helping you be successful. Just check out our reviews on the AppExchange.

### 6 Tools, 1 Low Price

One low subscription price gives you access to all 6 tools plus our Configuration Manager. We also offer great discounts for non-profits and NGOs.

For subscription pricing and more information on any of the tools in the iTools suite, please visit us on the Web at: [www.insitusoftware.com](http://www.insitusoftware.com)

## iTools State/Country Validation

iTools State/Country Validation is the automated way to maintain accurate, consistent and complete State and Country values for Salesforce Accounts, Contacts, Leads, Contracts and Users. Provides standardized ISO Code for use in reports, search and 3rd party integration.

iTools validation works 'behind the scenes' with absolutely no impact on the way your users add or update addresses. Batch validation is also available to clean up existing addresses with a click of a button. An easy to use custom view is provided to quickly review and correct invalid values. iTools supports the standard address fields for Accounts, Contacts, Leads, Contracts and Users.

An international standards-based library of content is used to deliver accurate results. State/Country names are provided in multiple languages and formats and can be customized to fit your needs.

| iTOOLS STATE/COUNTRY VALIDATION<br>Manage Address Content and Status |                           |                                   |
|----------------------------------------------------------------------|---------------------------|-----------------------------------|
| View:                                                                | Account - Billing Address |                                   |
| ADDRESS STATUS                                                       | NUMBER OF ADDRESSES       | ACTION                            |
| Address Not Validated                                                | 0                         |                                   |
| Missing State and Country                                            | 20                        | <a href="#">Correct Addresses</a> |
| Invalid State and Country                                            | 0                         |                                   |
| Invalid Country                                                      | 0                         |                                   |
| Invalid State                                                        | 6                         | <a href="#">Correct Addresses</a> |
| Missing State                                                        | 11                        | <a href="#">Correct Addresses</a> |

- Clean up thousands (or millions) of your existing addresses in a matter of minutes with a click of a button. Our iTool uses Batch Apex to get the job done in record time
- Relies on international, multi-language standards-based content to deliver accurate results. Will attach a country code to all addresses with a valid country value
- Use the country code to simplify report criteria, formulas, views and integration with 3rd party tools and services
- Customize the iTool to fit your needs by extending the library of alternate state/country names to support name variations that you regularly encounter such as custom abbreviations, common misspellings, alternate names, foreign languages and names with decorated characters
- Standardizes State and Country values to your organization's preferred name and format
- Finds invalid and missing values, plus incorrect state/country value combinations
- Use the iTool's custom view to review and quickly correct the data
- Fills in missing country values wherever possible—because we know this field is often left blank
- Properly handles state names and abbreviations that are shared by more than one country
